

Listing of Claims:

Please cancel claims 1-6.

7. (Original) A light fixture candle assembly comprising:

a stand having a light bulb socket adapted to receive a light bulb with an attachment base;

a translucent candle cover formed by an elongated sleeve having a length defined between a top portion and a bottom portion, said sleeve having a longitudinal bore therethrough which is dimensioned to receive said stand; and

wherein said length has sufficient dimension to extend said top portion of said sleeve above said attachment base of said light bulb attached to said socket.

Please cancel claims 8 and 9.

10. (Original) The light fixture candle assembly as recited in claim 7, wherein said length is dimensioned to extend said top portion of said sleeve between approximately 1/8 inch to 1/4 inch above said attachment base of said light bulb.

11. (Original) The light fixture candle assembly as recited in claim 7, wherein said length of said sleeve is dimensioned to extend said top portion of said sleeve approximately 1/4 inch above said attachment base of said light bulb.

12. (Original) The light fixture candle assembly as recited in claim 7, wherein said sleeve is formed from glass.

13. (Original) The light fixture candle assembly as recited in claim 12, wherein an interior surface of said longitudinal bore is coated with a colored material to provide a translucent layer.

14. (Original) The light fixture candle assembly as recited in claim 13, wherein said translucent layer is formed by paint which has been fired.

15. (Original) The light fixture candle assembly as recited in claim 7, wherein said sleeve has an exterior surface with surface ornamentation.

16. (Original) The light fixture candle assembly as recited in claim 15, wherein said surface ornamentation is formed to simulate candle wax dripping.

17. (Original) A candle cover for a light fixture candle assembly, said candle cover comprising:

an elongated sleeve formed of transparent glass;

said sleeve having a length defined between a top portion and a bottom portion, said sleeve having a longitudinal bore extending from said bottom portion to said top portion, said sleeve having a shoulder extending radially inward in said top portion to define a top hole; and

an interior surface of said sleeve being coated with a colored material.

18. (Original) The candle cover as recited in claim 17, wherein an interior surface of said longitudinal bore is coated with fired paint.

19. (Original) The candle cover as recited in claim 17, wherein an exterior surface of said sleeve has surface ornamentation formed to simulate candle wax dripping.

20. (new) A light fixture candle assembly comprising:

a stand having a light bulb socket adapted to receive a light bulb with an attachment base;

a translucent candle cover formed by an elongated sleeve having a length defined between a top portion and a bottom portion, said sleeve having a longitudinal bore therethrough which is dimensioned to receive said stand; and

wherein said length has sufficient dimension to extend said top portion of said sleeve above said attachment base of said light bulb attached to said socket.

wherein said sleeve defines a shoulder extending radially inward in said top portion of said sleeve to define a top hole, said top hole having a smaller dimension than said longitudinal bore.

21. (new) The light fixture candle assembly as recited in claim 20, wherein said top hole is dimensioned to receive a portion of said light bulb.
